

Instructions for Students:

1. Introduction and Group Formation

1. Understand the SAP Ecosystem:

- Familiarize yourselves with the key components of the SAP ecosystem, including SAP BTP, openSAP, and SAP Community. Consider why these tools are important in real-world applications.

2. Form Groups:

- Work together to form small groups of 4-5 members. Choose a different area of the SAP ecosystem for each group to focus on (e.g., SAP BTP, SAP Fiori, openSAP, SAP AppGyver or SAP Web IDE courses).

2. Research and Exploration

1. Conduct Research:

- Explore your assigned area thoroughly. Focus on the following:
 - Key features and functionalities of the tools
 - Available resources such as tutorials and documentation
 - Real-world applications or case studies related to your area
- Use SAP's official resources and community discussions to aid your research.

3: Prepare Presentations

1. Create Your Presentation:

- Prepare a presentation that summarizes your findings and project. Include the following:
 - An overview of your assigned area of the SAP ecosystem
 - Key features and tools you explored
 - Lessons learned and potential future applications

2. Practice and Revise:

- Practice your presentations in front of your peers to gather feedback and make necessary revisions.

4: Presentation Day (4/11/2024)

1. Present Your Findings:

- Present your findings and project to the class. Allow time for questions and discussions after each presentation.

2. Reflect on the Experience:

- After all presentations, participate in a class discussion to share key takeaways, insights into the SAP ecosystem, and your thoughts on future learning paths.

5: Documentation and Sharing

1. Compile Your Documentation:

- Create a report that includes your research, project outcomes, and reflections. Consider compiling your work into a shared document in Github.

2. Share Your Work:

- Share your projects and insights on the SAP Community platform or other relevant forums to contribute to the community.
